

## MODULE HANDBOOK

APPLIED REMOTE SENSING					
Module/Course Title	Student Workload	Credits	Semester	Frequency	Duration
<b>8720202124</b>	2 CU X 16 X 170'=90,6618	2	Odd	28 CU	14 x meetings
1	<b>Types of courses LECTURER PRACTICUM</b>	<b>Contact hours</b> (2CU X 1,59 ECTS) X{(50:170')X 28,51 Workhours= 26,64	<b>Independent Study</b> (2CU X 1,59 ECTS) X{(60:170')X 28,51 Workhours= 31,96	<b>Structured Study</b> (2CU X 1,59 ECTS) X{(60:170')X 28,51 Workhours= 31,96	<b>Class size</b>  32
2	<b>Prerequisites for participation (if applicable)</b> Pass the Basic Remote Sensing				
3	<b>Program Learning Outcomes (PLO)</b>				
	<p>PLO 2 Able to analyze regional and zoning characteristics (regionalization) in the context of resources and disasters based on the principles and approach of Geography to support sustainable development</p>				
	<p>PLO 6 Able to make appropriate decisions in the context of solving problems in the field of geography and geography education, based on the results of analysis of information and data</p>				
	<p>PLO 8 Able to formulate, process, analyze data, and present geosphere information, both physical and human aspects by using geospatial technology for geography learning and research</p>				
	<p>PLO 12 Able to work together, have social sensitivity, high concern for society and the environment</p>				

	<p><b>Course Learning Outcome (CLO)</b></p> <ol style="list-style-type: none"> <li>1. Able to analyze regional and zoning characteristics (regionalization) in the context of resources and disasters based on the principles and approach of Geography to support sustainable development in East Java especially in own regency area based on remote sensing data.</li> <li>2. Able to solve problems in the field in the field of geography and geogaphy education based on analysis of remote sensing data.</li> <li>3. Able to formulate, process, analyze data, and present the spatial problem in learning and research based on remote sensing data.</li> <li>4. Able to work in groups to solve social and environmental problems.</li> </ol>
4	<p><b>Subject aims/Content</b></p> <ol style="list-style-type: none"> <li>1. Applied Remote Sensing for land cover analysis</li> </ol>

	<ol style="list-style-type: none"> <li>2. Applied Remote Sensing for land use analysis</li> <li>3. Applied Remote Sensing for natural resource analysis</li> <li>4. Applied Remote Sensing for agricultural analysis</li> <li>5. Applied Remote Sensing for forestry analysis</li> <li>6. Applied Remote Sensing for disaster analysis</li> <li>7. Applied Remote Sensing for socioeconomic analysis</li> <li>8. Applied Remote Sensing for transport analysis</li> </ol>
5	<b>Teaching methods</b> Project Based Learning, Self Direction Learning, Small Group Discussion
6	<b>Assessment Methods</b> Portofolio, paper test, demonstration test
7	<b>This module/course is used in the following study programme/s as well</b> -
8	<b>Responsibility for module/course</b> COMPULSORY/ELECTIVE*/
9	<b>Other information</b> <ol style="list-style-type: none"> <li>1. Adams, J.B., Gillespie, A.R., 2006. <b>Remote Sensing of Landscape with Spectral Images – A Physical Modeling Approach</b>.
