

Summary of Curriculum

*Undergraduate Program in Chemistry
Faculty of Mathematics and Natural Science
Universitas Negeri Surabaya*

2021

A. OBJECTIVES OF THE DEGREE PROGRAMME

The Vision and Mission of Institution

Vision of Universitas Negeri Surabaya:

Excellent in Education, Strong in Science

Mission of Universitas Negeri Surabaya:

1. To conduct education and learning centered on students by using effective instructional approaches, and optimizing the use of technology
2. To conduct researches in educational sciences, natural sciences, social and cultural sciences, arts, and/or sports, and developments of technologies whose findings are beneficial for the development of sciences and public welfares
3. To disseminate science, technology, arts, culture and sports, and research results through community service oriented towards empowering and civilizing society
4. To realize Unesa an educational center, especially for primary and secondary educations as well as a scientific center based on the noble values of national culture
5. To conduct an autonomous, accountable, and transparent high educational governance for a sustainable quality assurance and improvement.

The Vision and Mission of Faculty

Vision of Faculty of Mathematics and Natural Science (FMNS):

Excellent in Educational Mathematics and Natural Science, Strong in Mathematics and Natural Science Studies

Extended Vision of Faculty of Mathematics and Natural Science (FMNS):

1. Excellent in innovation of mathematics and natural science education.
2. Strong in mathematics and natural science studies and their applications for strengthening mathematics and natural science education (wider mandate).
3. Excellent in global competition.
4. Excellent in graduates having environmental-minded and entrepreneurial spirit.

* “excellent” means to be innovative, competitive, and always trying to improve quality.

“strong” means to work systematically, methodically, and objectively, to support the excellence of the studies in mathematics and natural sciences.

Mission of FMNS

1. To conduct innovative and research-based mathematics and natural science education to produce graduates who are environmentally minded, entrepreneurial in spirit and have global competitiveness.
2. To conduct researches on mathematics and natural sciences to strengthen both the studies being recognized nationally and internationally and mathematics and natural science education.
3. To conduct research-based community services to support community welfare.
4. To build a strong network of collaborations with stakeholders to improve the quality and image of FMNS.
5. To conduct an autonomous, credible, fair, accountable, and transparent governance for quality assurance and quality improvement in FMNS.

Objectives of FMNS

1. Produces graduates in mathematics and natural sciences and education having environmental insight, entrepreneurial spirit, and global competitiveness.
2. Yields research results in mathematics and natural sciences and education to strengthen the studies of MNS and MNS education.
3. Implements research results for community services to support community welfare.
4. Executes strong collaboration with stakeholders to improve the quality and image of FMIPA.
5. Realizes a governance system in FMNS that is autonomous, credible, fair, accountable, and transparent for quality assurance and quality improvement.

The Vision of Undergraduate Program of Chemistry (UPC):

“Become an excellent and competitive study program in the field of chemistry, research-based in natural resource development and environmental perspective”

The Missions of Undergraduate Program of Chemistry (UPC):

1. Organizing academic education in the field of chemistry based on natural resource research results resources with an environmental perspective.
2. Develop innovative and applied basic research in the field of chemistry to develop natural resources with an environmental perspective

3. Dedicating an expertise in the field of chemistry and its application to empower the community
4. Build and expand a network of good cooperation with various institutions / government agencies and the private sector and stakeholders for the continued development of chemistry study program.
5. Creating a chemistry study program system management that are credible, transparent, accountable, responsible and fair.

B. PROGRAM EDUCATIONAL OBJECTIVES(PEO)

The Chemistry graduates are prepared to achieve Programme Educational Objectives (PEOs) that is to have accomplishment in their early career as a practitioner; research assistant; and entrepreneur who have basic knowledge of chemical concepts and instrumentation, exhibit laboratory technical skills to solve chemistry problem and demonstrate self-development in a sustainable manner, as well as work in the field of green-technopreneurship..

Details of the PEO for Graduates of the undergraduate program of Chemistry are as follows

1. Able to master the fundamental knowledge of chemistry, the basic principles of chemical instruments, laboratory organizations, Occupational Health and Safety, scientific methods, digital literacy to solve a problem in their profession/workplace (professional).
2. Able to improve higher-order thinking skills by analyzing, evaluating data, and being creative; communicating ideas, able to take the right initiatives, be good decision-makers, and have the ability to lead in relevant field workgroups.
3. Able to develop and apply chemistry concepts along with the progress of science and technology as well as humanities values.
4. Able to demonstrate good communication in a collaborative work, honest, and be responsible for his expertise in the field of chemistry and have an eco-entrepreneurial character (ecopreneurship)
5. Able to develop themselves and always update the development of chemistry, as well as lifelong learning through formal or non-formal education.

The formulated PEO has broadly considered input from the meeting of the Indonesian Chemical Association (IPR) division of chemistry, alumni, professionals (principals and teachers). The PEO also has significant relevance to the Indonesian National Qualification Framework (INQF) and the National Higher Education Standards (SN Dikti). Table 1 indicates the correlation between the objectives of the

undergraduate program in Chemistry and the 6th level (the level for bachelor education) of the Indonesian National Qualification Framework (INQF).

Table 1. Correlation Between PEO and INQF

PEO vs INQF	Capable of apply science, technology, and art within his/her expertise and adaptable to various situations faced during solving a problem	Mastering in-depth general and specific theoretical concepts of certain knowledge and capable of formulating problem-solving procedure	Capable of taking strategic decision based on information and data analysis as well as providing direction in choosing several alternative solutions	Responsible for his/her own jobs and can be assigned to take responsibility of the attainment of organization's performances
PEO 01	S	S	S	NS
PEO 02	S	S	S	NS
PEO 03	NS	S	S	NS
PEO 04	NS	NS	S	S
PEO 05	NS	S	S	NS

S-Strong, NS-Not Strong

C. PROGRAM LEARNING OUTCOMES (PLO)

Originating from PEO, UPC has the following Learning Outcomes Programs (PLOs) for established graduates. UPC sets the program learning outcomes for the graduates as presented in Table 2.

Table 2. PLO of Undergraduate Program in Chemistry

ASPECTS	PLO	CODE
KNOWLEDGE	1. Able to master the concepts of structure, dynamics and energy, as well as the basic principles of separation, analysis, synthesis, and characterization of micromolecular compounds and their applications	KNO-1
	2. Able to master the basic principles and knowledge of how to operationalize instruments for the analysis and characterization of compounds, as well as utilizing ICT for modeling more specific molecules	KNO-2
SKIL	3. Able to master the principles of Occupational Health and Safety, manage laboratories and use their equipment, and operate instrumental of chemistry	SKI-1
	4. Able to design an activity to solve problems by implementing capabilities in the field of chemistry that refers to ecopreunership	SKI-2

ASPECTS	PLO	CODE
COMPETENCIES	5. Able to apply logical, critical, systematic and innovative thinking in the context of the development or implementation of science and technology by observe and applying the value of humanities in accordance with the field of chemistry in solving problems	COM-1
	6. Able to master the basics of the scientific method, designing and conducting research, compiling scientific reports and communicating them both verbally and in writing by utilizing information and communication technology	COM-2
ATTITUDE AND SOCIAL	7. Able to build teamwork and have entrepreneurial skills that are environmental perspective, and make the right, honest and responsible decisions in solving problems of chemistry and have social sensitivity as a obligation of citizens and religious communities	SOC-1
	8. Able to adapt to various developments in chemistry, continue to develop and learn throughout long-life education, both formal and nonformal	SOC-2

These goals strongly support the Indonesian National Qualification Framework (INQF) for undergraduate education and are consistent with the institution's mission. Their consistency with the mission of Unesa and FMNS is realized by producing graduates who have strong abilities to understand and master chemical knowledge and issues related to chemistry. This capability enables graduates to become professionals who take the primary role as quality control, researchers, lecturers, and entrepreneurs in national and global development. Table 3 shows the correlation between PLOs and PEOs.

Table 3. Matrix of the Correlation between Objectives of the Undergraduate Program in Chemistry and the Program Learning Outcomes

	PEO 01	PEO 02	PEO 03	PEO 04	PEO 05
KNO-1	S	NS	S	NS	NS
KNO-2	S	NS	S	NS	NS
SKI-1	S	NS	S	NS	NS
SKI-2	NS	S	S	NS	NS

Subject Specific Criteria (SSC)	PLO							
	1	2	3	4	5	6	7	8
13. are able to work both alone and as a member of international, mixed-gender groups ,							√	
14. are familiar with the basic principles for conduction of projects and able to develop appropriate leadership responsibility							√	
15. are prepared for entry to professional life in an industrial or academic environment, through adequate practical relevance of the degree programme								√

D. PROGRAMME STRUCTURE

The undergraduate program in UPC FMNS Universitas Negeri Surabaya has a degree of Bachelor of Science (B.Sc.) or Sarjana Sains (S.Si.) in Bahasa Indonesia As mentioned, in addition to being based on input from stakeholders, the improvement of the UPC curriculum structure is also the result of an evaluation of the current conditions and future needs of the profession in chemistry, taking into account national and global challenges. By accommodating challenges Accordingly, the structure and syllabus of the course have been revised and applied in the period 2013 - 2018. Evaluations of ongoing implementation are carried out every year. The curriculum of the Chemistry Study Program is expected to be able to answer the demands of the needs in the field. Some issues considered in the preparation and development of this curriculum are as follows.

1. Indonesian National Qualification Framework (KKNI: Kerangka Kualifikasi Nasional Indonesia) and National Standards for Higher Education.
2. 21st century skills needed, namely critical thinking and problem solving, creative and innovative, communication, and collaboration.
3. The ASEAN Economic Community since 2015
4. The importance of literacy, according to the Law of Ministry of Education (Permendikbud No. 23 of 2015) concerning the improvements of manners
5. The development of global community dynamics that need to be anticipated for its development to prepare reliable Indonesian human resources, such as the challenges of the ASEAN Free Trade Area (AFTA), the World Trade Organization (WTO), and the Asia Pacific Economic Cooperation (APEC).

Furthermore, the current curriculum adopts new paradigm of education, which are outcomes based education, learner-centered learning, continuous improvement, and international benchmarking and accreditation. The curriculum is periodically updated

every five years by following the development processes of the curriculum considering some principles of the curriculum development. This is shown in the following chart.

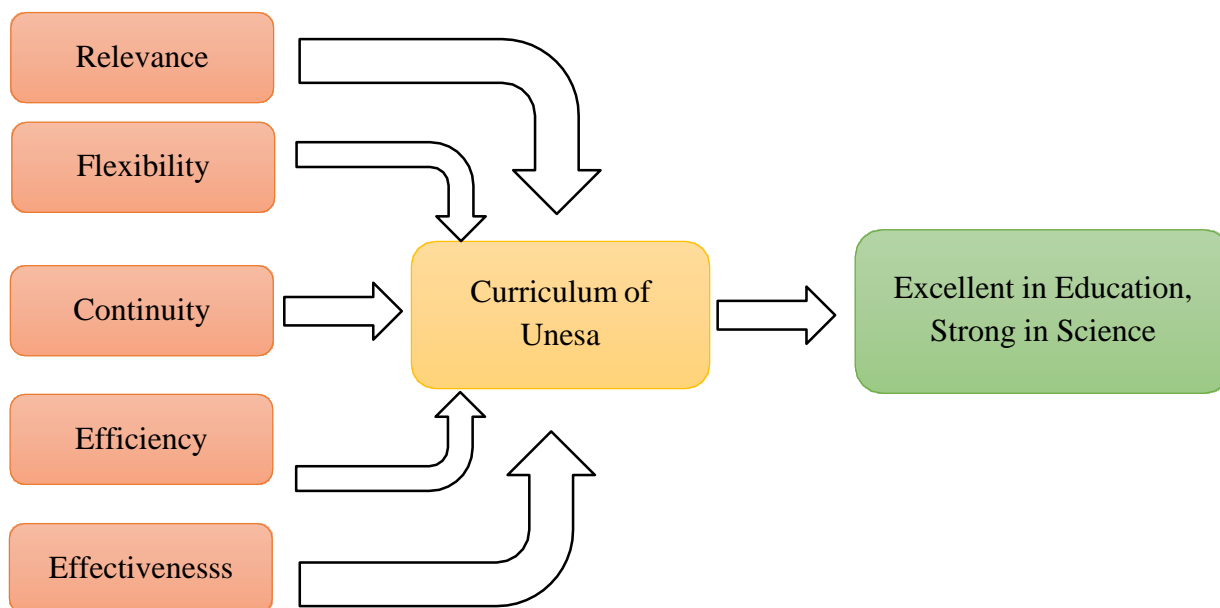

Figure 1. Principles of curriculum development

The UPC curriculum is delivered in 4 years through 4 main structures: fundamental concepts, strong foundation of fundamental concept, advance concept and final projects, as illustrated in Figure 2. In this structure, the learning process to gain competency is modeled in the course flow. Fundamental concepts is the foundation of the program, strong foundation of fundamental concept, advance concept as pillars and final projects as a roof that includes all knowledge in the chemistry field.

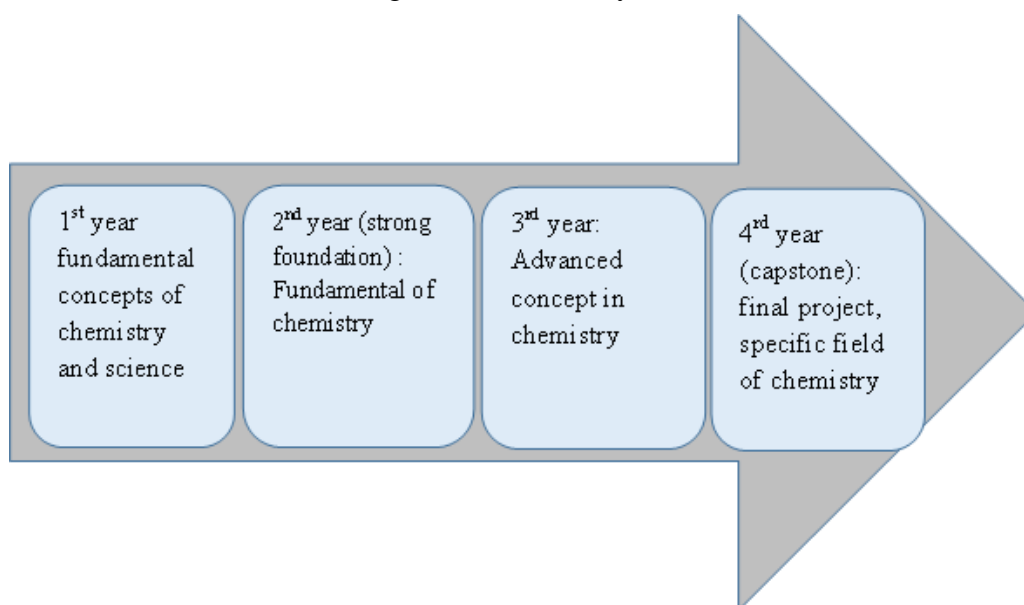

Figure 2. Model of curriculum structure of undergraduate program in Chemistry

To complete the learning program, students should take 144 credit units (CU) comprising 124 CU as a compulsory courses and 20 CU as an elective course.

Table 5. Compulsory and elective courses in undergraduate program in Chemistry, Universitas Negeri Surabaya

CU compulsory courses	CU	Note
CU of compulsory courses	121	Number of courses that must be taken by students for graduation, and there are 49 compulsory courses that provided
CU of elective courses	23	The number of elective courses provided is 48 credits
Total	144

The relationship between one course and other courses within the framework of UPC curriculum structure is shown below. The road-map also demonstrates that the curriculum structure consists of multi-discipline courses designed in 8 semesters in order to achieve the comprehensiveness in chemistry education. The roadmap also describes in different coloured boxes corresponding to the UPC's PLO in Table 8. In the common first year, students are obliged to attend courses to provide a good foundation of natural science and basic education to acquire scientific thought towards the planning, development and evaluation of chemistry learning. For FMS students, four introductory courses are given, namely: (i) Basic Chemistry, (ii) General Physics, (iii) General Biology, and (iv) Basic Mathematics. Meanwhile, with regards to the development of interpersonal capability, there are 7 supporting courses with a total of 14 credit units which are given to students, such as [Religion Education](#), [Indonesian](#), [Citizenship Education](#), [Basic Cultural and Social Science](#), and [Digital Literacy](#). Starting from the third semester, the students begin to learn about spatial and non-spatial basic elements and principles of learning chemistry. Students are further encouraged to apply their knowledge in a series of student projects that are oriented on laboratory. Further studies for more specific and / or supportive subjects can be fulfilled through elective courses provided internally at UPC. This will give students the opportunity to sharpen their knowledge according to their specific interests. In addition, internships in a company as practice-based learning are also well integrated into the program structure. The study program concluded by taking a final project that worth 6 CU. The course roadmap to achieving the whole learning outcomes are shown in Figure 3-6.

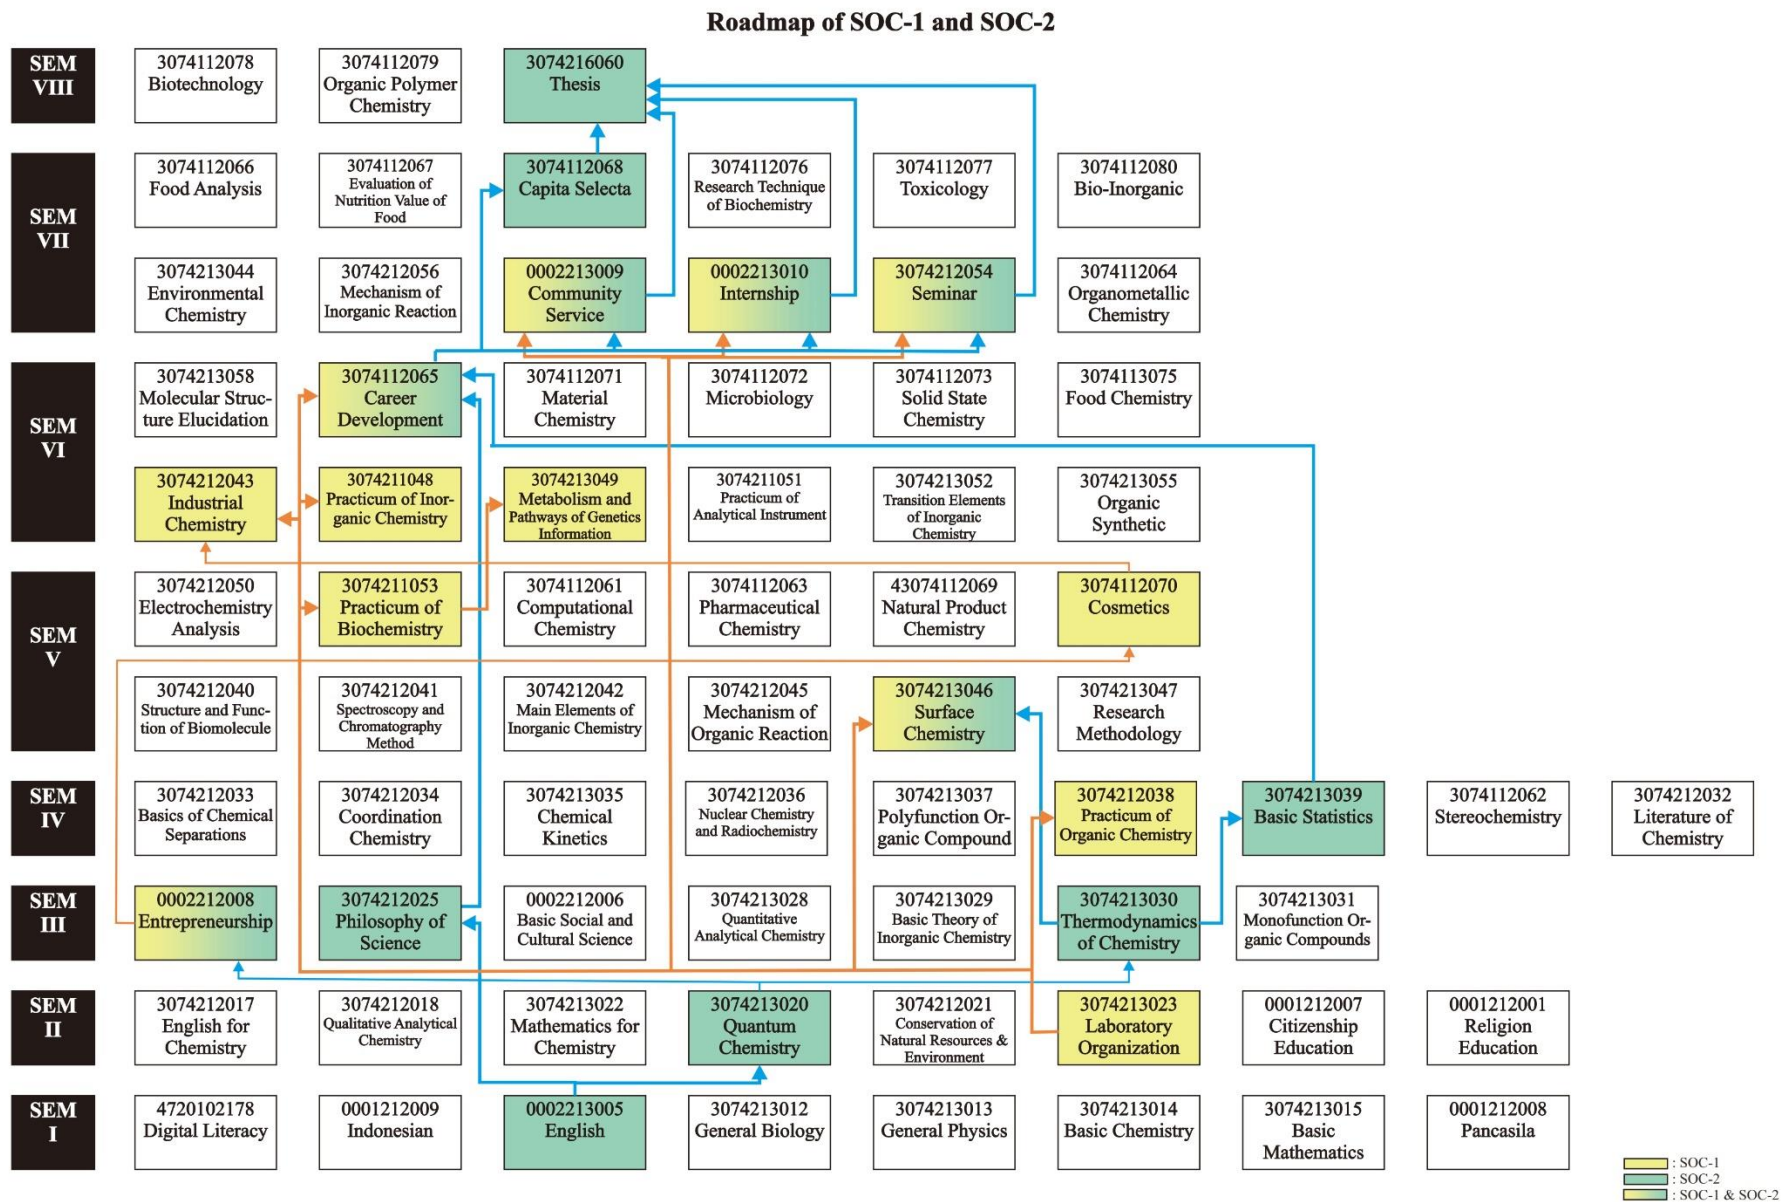

Figure 3. Course Roadmap for Achieving Learning Outcomes (Knowledge)

Roadmap of SKI-1 and SKI-2

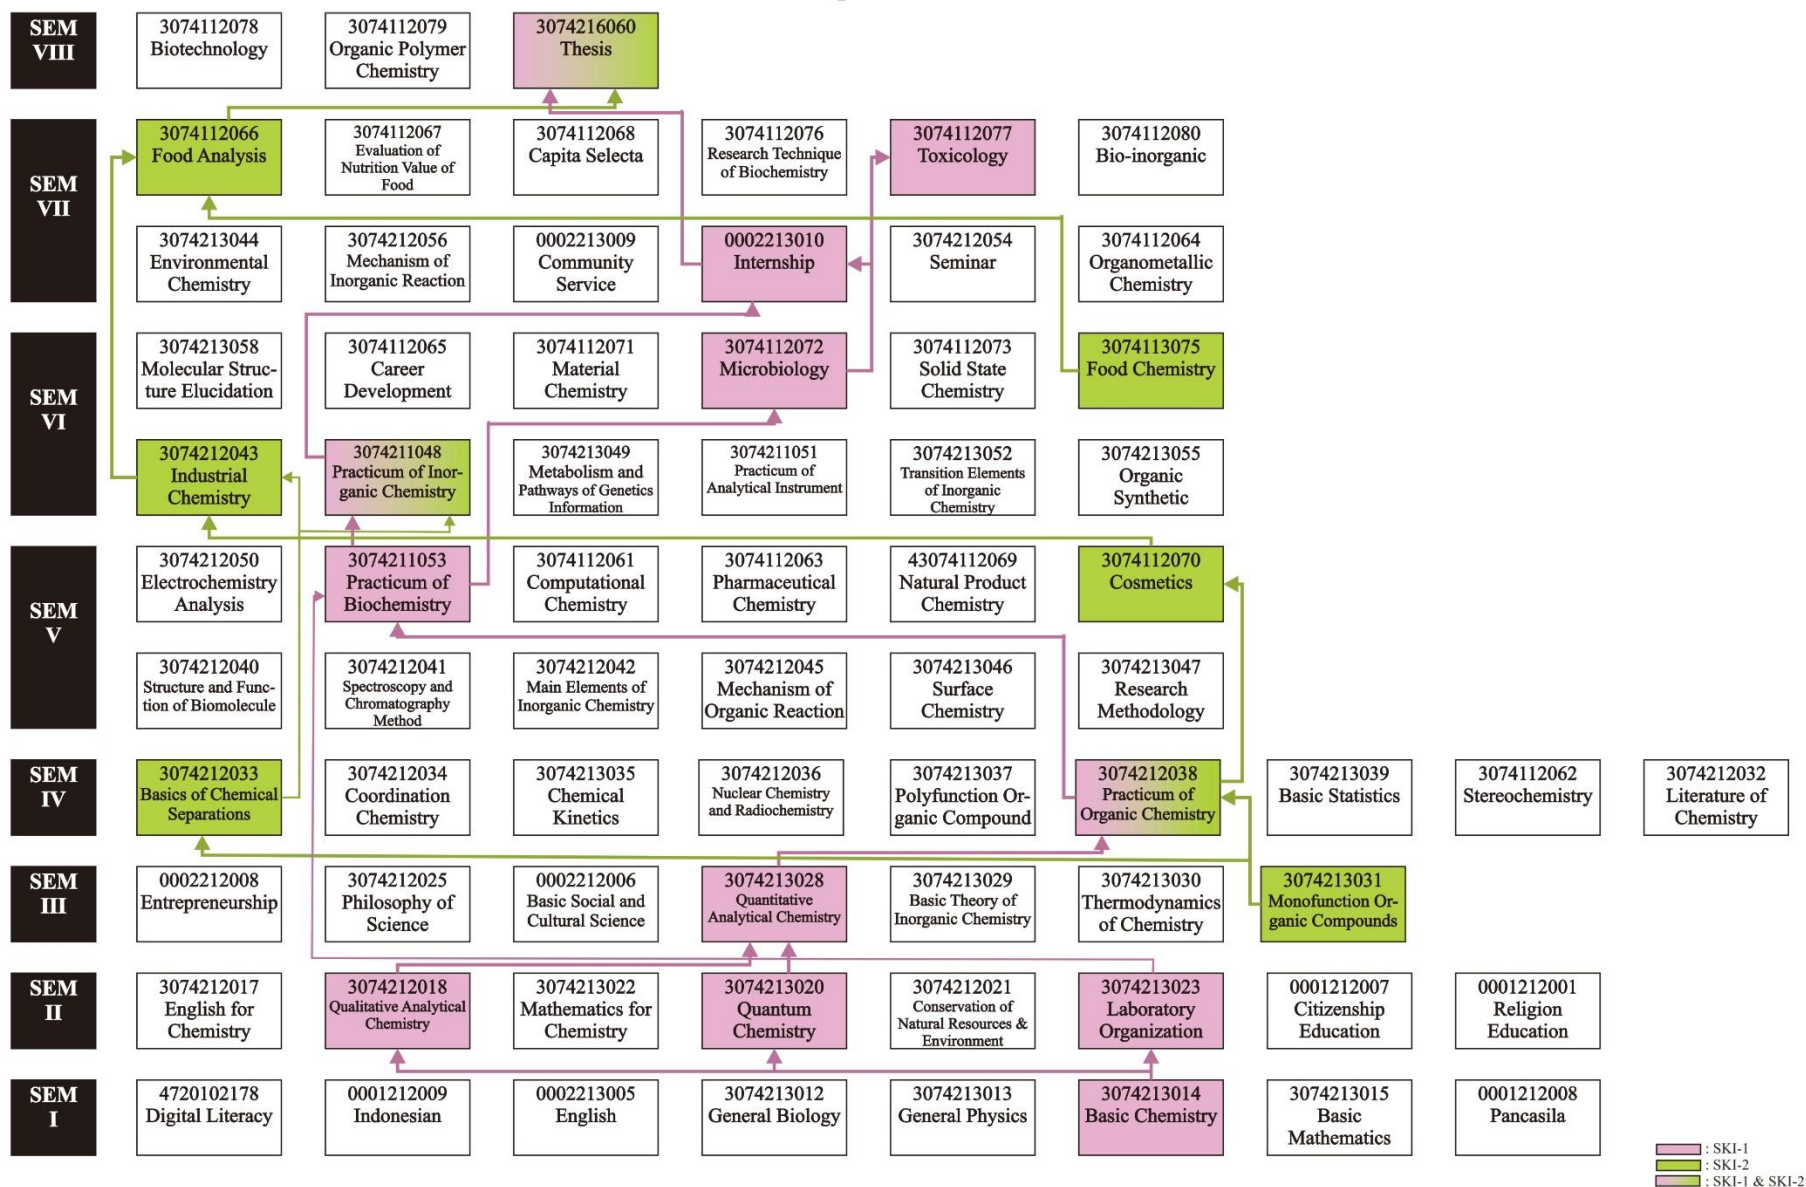

Figure 4. Course Roadmap for Achieving Learning Outcomes (Skill)

Roadmap of COM-1 and COM-2

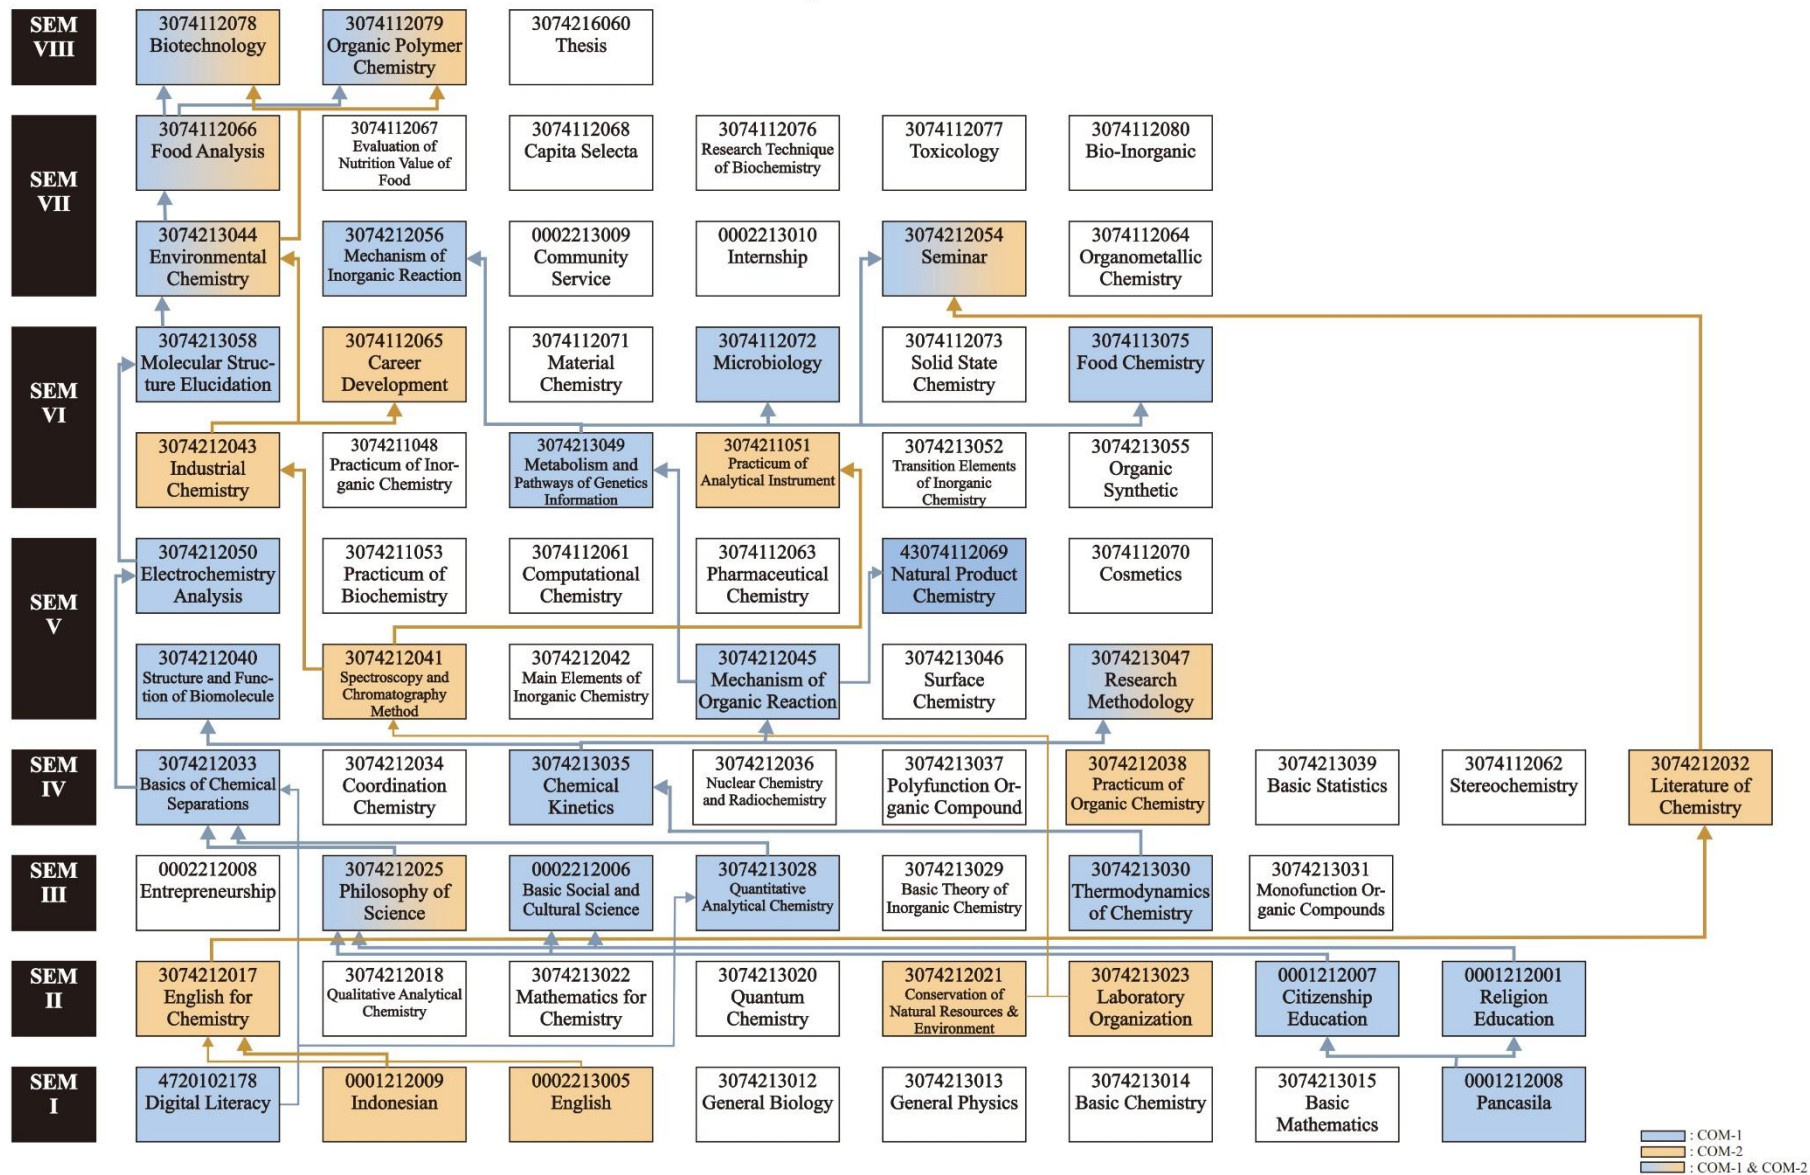

Figure 5. Course Roadmap for Achieving Learning Outcomes (Competencies)

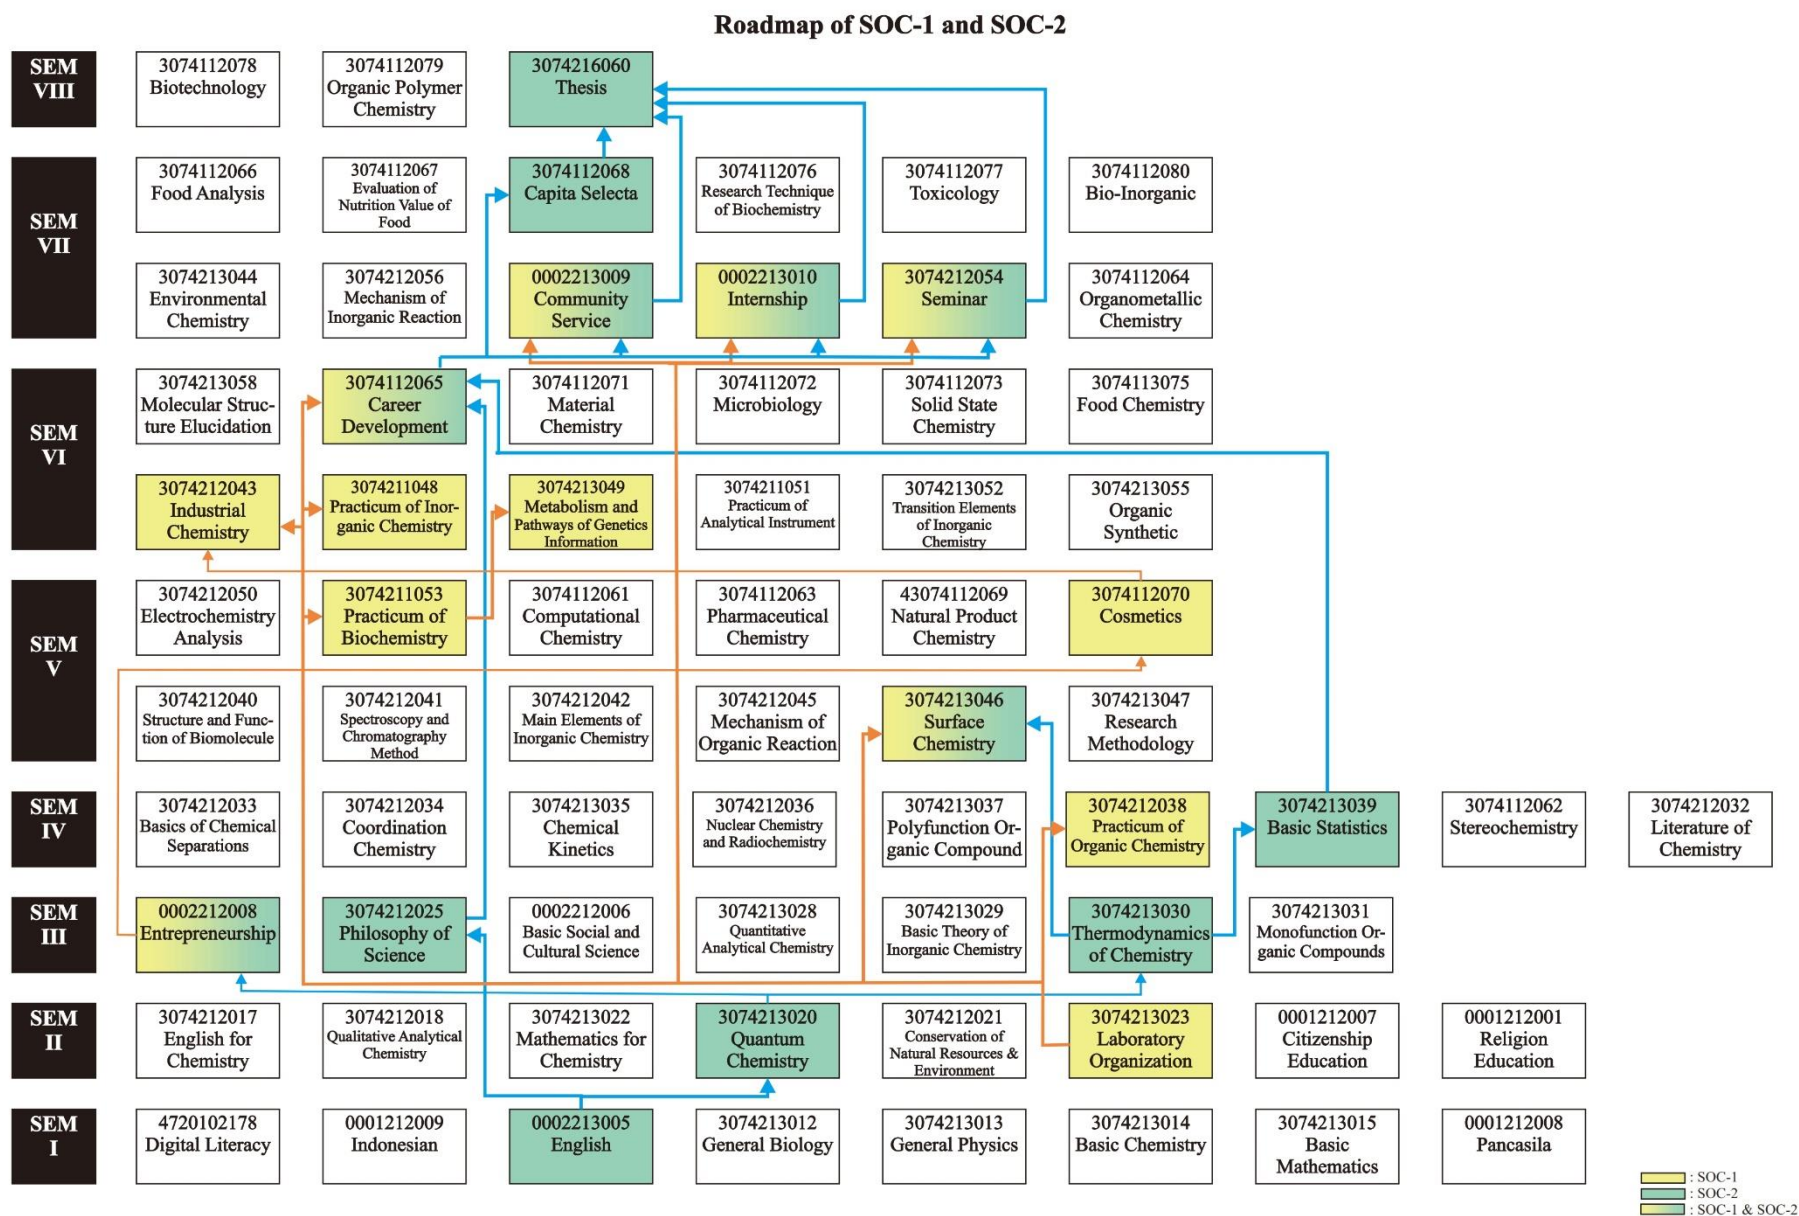

Figure 6. Course Roadmap for Achieving Learning Outcomes (Attitude and Social)

Knowledge aspects related to mastering the concepts of structure, dynamics and energy, as well as the basic principles of separation, analysis, synthesis and characterization of micromolecular compounds and their applications and mastering basic principles and knowledge of how to operationalize instruments for the analysis and characterization of chemical compounds, as well as utilizing ICT for modeling more specific chemical molecules Figure 1 shows the Course Roadmap for Achieving Learning Outcomes (Knowledge).

Skill aspects related to mastering the principles of Work Safety and Security, manage laboratories and use their equipment and how to operate chemical instruments and being able to design an activity to solve problems by implementing the ability of the chemical field that refers to ecopreneurship. Figure 4 shows the Course Roadmap for Achieving Learning Outcomes (Skill).

Competencies Aspect related to applying logical, critical, systematic and innovative thinking in the context of the development or implementation of science and technology by paying attention and applying the value of the humanities in accordance with the field of chemistry in solving problems and mastering the basics of the scientific method, designing and conducting research, compiling scientific reports and communicating them both verbally and in writing by utilizing information and communication technology. Figure 5 shows the Course Roadmap for Achieving Learning Outcomes (Competencies).

Attitude and Social aspects related to building a teamwork and have entrepreneurial skills that are environmental perspective and related to adapting various developments in chemistry, continue to develop and learn throughout life to continue education, both formal and informal. Figure 6 shows the Course Roadmap for Achieving Learning Outcomes (Attitude and Social).
